

Enrollment App Quick Deploy Checklist

Repository: nr-brmb-agristability-powerapps/enrollment app

Updated: 2026-06-18

DEV Publish

1. Open PowerShell in `c:\agristability\nr-brmb-agristability-powerapps\enrollment app`.
2. Build the app.
3. Push with `npx power-apps push`.

```
npm run build
npx power-apps push
```

TEST Migration + Publish

1. Retarget project to TEST environment.
2. Re-add required data sources if needed.
3. Build the app.
4. Push with `npx power-apps push`.

```
pac code init -n "enrollment app" -env "YOUR-TEST-ENV-ID"
pac code add-data-source -a "shared_office365users" -c "YOUR-CONNECTION-ID"
pac code add-data-source -a "shared_sql" -c "YOUR-CONNECTION-ID" -t "[dbo].[MobileDeviceInventory]" -d "SERVER,DATABASE"
npm run build
npx power-apps push
```

Post-Push Validation

1. Landing page opens Enrolments by default with filters cleared.
2. Dashboard nav opens Power BI in a new tab.
3. Enrolments details/calculation/history navigation still works.
4. Active Dataverse config row is populated for core and Power BI fields.

This checklist intentionally uses `npx power-apps push` (not `pac code push`).
